mcrqa: open geochemistry QA checker (below-detection values, unit errors, altered samples, duplicates)

Danso, Bezali Kwame[1]; Abdullah, Saadatu[2]

Show affiliations

Python package and command-line tool that flags below-detection and uninformative detection limits, above-limit values, semi-quantitative and partial-digestion methods, unit errors, oxide-total problems, likely altered igneous samples (LOI, CIA, Ishikawa index, source descriptions), coordinate problems, and probable cross-source duplicates, for long-format or wide geochemistry tables. Built for MCR-GeoChem; works on any table.
